

FCC / ISED Canada Test Report

FOR:

KS Technologies

Model Name:

KST1020

Product Description:

Bluetooth Low Energy Sensor Module

FCC ID: 2AA3A-UNITYV8 IC ID: 11487S-UNITYV8

Applied Rules and Standards: 47 CFR Part 15.247 (DTS) RSS-247 Issue 1 (DTSs) RSS-Gen Issue 4

REPORT #: EMC_KSTEC-003-17001_15.247_DTS Rev 1

DATE: 2017-04-28

A2LA Accredited

IC recognized # 3462B-1

CETECOM Inc.

1 Assessment

The following device was evaluated against the applicable criteria specified in FCC rules Parts 15.247 of Title 47 of the Code of Federal Regulations and the relevant ISED Canada standard RSS-247 Issue 1, and RSS-Gen Issue 4.

| Company | Description | Model # |
|-----------------|------------------------------------|---------|
| KS Technologies | Bluetooth Low Energy Sensor Module | KST1020 |

Responsible for Testing Laboratory:

Peter Nevermann

| 2017-04-28 | Compliance | (Director Radio Communications and EMC) | |
|------------|------------|---|-----------|
| Date | Section | Name | Signature |

Responsible for the Report:

Kris Lazarov

| 2017-04-28 | Compliance | (EMC Engineer) | |
|------------|------------|----------------|-----------|
| Date | Section | Name | Signature |

The test results of this test report relate exclusively to the test item specified in Section3.

CETECOM Inc. USA does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM Inc. USA.

Date of Report 2017-04-28 Page 4 of 46

2 Administrative Data

2.1 Identification of the Testing Laboratory Issuing the EMC Test Report

| Company Name: | CETECOM Inc. |
|------------------------------|------------------------|
| Department: | Compliance |
| Street Address: | 411 Dixon Landing Road |
| City/Zip Code | Milpitas, CA 95035 |
| Country | USA |
| Telephone: | +1 (408) 586 6200 |
| Fax: | +1 (408) 586 6299 |
| Director Radio Com. and EMC: | Peter Nevermann |
| Responsible Project Leader: | Kris Lazarov |

2.2 Identification of the Client

| Applicant's Name: | KS Technologies |
|-------------------|---------------------------------|
| Street Address: | 1910 Vindicator Drive Suite 100 |
| City/Zip Code | Colorado Springs, CO 80919 |
| Country | USA |
| Contact Person: | Mark Rieker |
| Phone No. | (719) 694-8193 |
| e-mail: | mark.rieker@kstechnologies.com |

2.3 Identification of the Manufacturer

| Manufacturer's Name: | Same as Applicant |
|------------------------|-------------------|
| Manufacturers Address: | |
| City/Zip Code | |
| Country | |

Page 5 of 46

FCC ID: 2AA3A-UNITYV8 IC ID: 11487S-UNITYV8

3 Equipment Under Test (EUT)

Date of Report 2017-04-28

3.1 EUT Specifications

| Model No: | KST1020 | | |
|--|---|--|--|
| HW Version : | Rev E See note 1 | | |
| SW Version : | Nrf52832_xxaa.hex | | |
| FCC-ID: | 2AA3A-UNITYV8 | | |
| IC-ID: | 11487S-UNITYV8 | | |
| HVIN: | KST1020 | | |
| PMN: | Unity V8 Sensor Engine | | |
| Product Description: | Bluetooth Low Energy Sensor Module | | |
| Frequency Range / number of channels: | Nominal band: 2402 MHz – 2480 MHz; Center to center: 2402 MHz (Ch 0) – 2480 MHz (Ch 39), 40 channels | | |
| Type(s) of Modulation: | Bluetooth version 4.0, Low Energy, GFSK modulation. | | |
| Modes of Operation: | Bluetooth LE | | |
| Declared Antenna Information: | Chip antenna max gain = 5.3 dBi | | |
| Max. Output Powers: | Peak Conducted Power = 4 dBm | | |
| Power Supply/ Rated Operating Voltage Range: | Battery pack V min: 1.7 V dc/ V nom: 3.0 V dc / V max: 3.6 V dc | | |
| Operating Temperature Range | -40 °C to 85 °C | | |
| Other Radios included in the device: | N/A | | |
| Sample Revision | □Prototype Unit □Pre-Production | | |

Note 1: RSE testing was conducted with rev D sample followed up by a spot-check retest from 1 GHz to 40 GHz on mid channel with rev E sample. For the list of hardware changes from rev D to rev E see table below.

Page 6 of 46 IC ID: 11487S-UNITYV8

FCC ID: 2AA3A-UNITYV8

Hardware changes from Rev D to Rev E:

| Description of Change | Reason for Change | How the Change is Implemented |
|---|--|---|
| LIS2DH changed from I2C to SPI | Improves battery performance of product | Connected one new signal from the LIS2DH to the primary microcontroller. No BOM Change. No component placement or orientation change. |
| GPIO2, GPIO3, GPIO4 Now Assigned as SPI Bus | Allowed us to change the LIS2DH communications from I2C to SPI | Firmware change only; no change was made to the hardware. |
| 32.768kHz crystal changed to new P/N in Nordic DK | Part was no longer available. | This is a BOM change only for a form/fit/function direct crystal replacement (same frequency, same footprint, no hardware change, etc.) |

3.2 EUT Sample details

Date of Report 2017-04-28

| EUT# | Serial Number | HW Version | SW Version | Notes/Comments |
|------|----------------------|------------|-------------------|-----------------------------|
| 1 | Engineering Sample 1 | Rev D | Nrf52832_xxaa.hex | Radiated testing |
| 2 | Engineering Sample 2 | Rev E | Nrf52832_xxaa.hex | Radiated spot-check testing |
| 3 | Engineering Sample 3 | Rev E | Nrf52832_xxaa.hex | Conducted testing |

3.3 Accessory Equipment (AE) details

| AE# | Туре | Model | Manufacturer | Serial Number |
|-----|------------------|-------------------|--------------|---------------|
| 1 | 3 V Battery pack | 2 x AAA Batteries | N/A | N/A |

3.4 Test Sample Configuration

| EUT Set-up # Combination of AE used for test set up | | Comments |
|---|--------------|-----------------------------|
| 1 | EUT#1 + AE#1 | Radiated testing |
| 2 | EUT#2 + AE#1 | Radiated spot-check testing |
| 3 | EUT#3 + AE#1 | Conducted testing |

Date of Report 2017-04-28 Page 7 of 46 IC ID: 11487S-UNITYV8

FCC ID: 2AA3A-UNITYV8

3.5 Justification for Worst Case Mode of Operation

During the testing process the EUT was tested with transmitter sets on low, mid and high channels. For radiated measurements, all data in this report shows the worst case between horizontal and vertical antenna polarizations and for all orientations of the EUT.

The channels and modulation scheme of the EUT was set with diagnostic software (not available to the end user), and the transmitter output power was measured using spectrum analyzer (Peak Power).

The application called J-Link RTT Viewer from Segger, was used to program the sample to low, mid and high carrier channel with the following parameters.

- Output power to +4dBm, the maximum allowable by the product.
- Data Rate to 1Mb/s, the standard for Bluetooth Low Energy.

Date of Report 2017-04-28 Page 8 of 46

FCC ID: 2AA3A-UNITYV8 IC ID: 11487S-UNITYV8

4 Subject of Investigation

The objective of the measurements done by CETECOM Inc. was to assess the performance of the EUT according to the relevant requirements specified in FCC rules Part 15.247 of Title 47 of the Code of Federal Regulations and Radio Standard Specification RSS-247 Issue 1 of ISED Canada.

This test report is to support a request for new equipment authorization under the FCC ID: 2AA3A-UNITYV8 and IC ID: 11487S-UNITYV8

Testing procedures are based on 558074 D01 DTS Meas Guidance v04 – "GUIDANCE FOR PERFORMING COMPLIANCE MEASUREMENTS ON DIGITAL TRANSMISSION SYSTEMS (DTS) OPERATING UNDER SECTION 15.247" - April 5, 2017, by the Federal Communications Commission, Office of Engineering and Technology, Laboratory Division.

5 Measurement Results Summary

| Test Specification | Test Case | Temperature and Voltage Conditions | Mode | Pass | NA | NP | Result |
|--|---|------------------------------------|------|------|----|----|----------|
| §15.247(a)(1) RSS-247 5.2(1) | Emission Bandwidth | Nominal | BTLE | | | | Complies |
| §15.247(e) RSS-247 5.2(2) | Power Spectral Density | Nominal | BTLE | | | | Complies |

6 Measurements

6.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus, with 95% confidence interval (in dB delta to result), based on a coverage factor k=1.

Radiated measurement

9 kHz to 30MHz ±2.5 dB (Magnetic Loop Antenna) 30 MHz to 1000 MHz ±2.0 dB (Biconilog Antenna) 1 GHz to 40 GHz ±2.3 dB (Horn Antenna)

Conducted measurement

150 kHz to 30 MHz ± 0.7 dB (LISN)

RF conducted measurement ±0.5 dB

6.2 Environmental Conditions during Testing:

The following environmental conditions were maintained during the course of testing:

• Ambient Temperature: 20-25°C

• Relative humidity: 40-60%

6.3 Dates of Testing:

2/08/2017 - 4/28/2017

Page 10 of 46

FCC ID: 2AA3A-UNITYV8
IC ID: 11487S-UNITYV8

7 Measurement Procedures

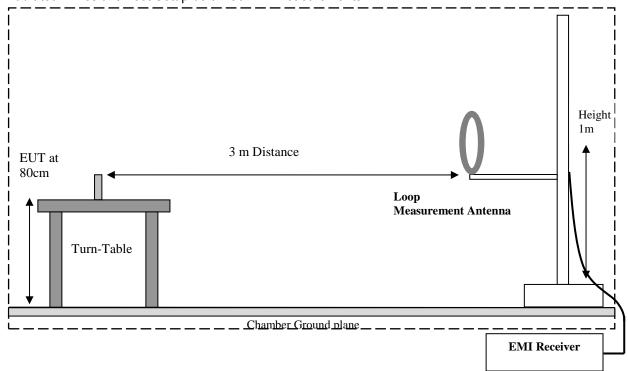

Date of Report 2017-04-28

7.1 Radiated Measurement

The radiated measurement is performed according to: ANSI C63.10 (2013)

- The exploratory measurement is accomplished by running a matrix of 16 sweeps over the required frequency range with R&S Test-SW EMC32 for 4 positions of the turntable, two orthogonal positions of the EUT and both antenna polarizations. This procedure exceeds the requirement of the above standards to cover the 3 orthogonal axis of the EUT. A max peak detector is utilized during the exploratory measurement. The Test-SW creates an overall maximum trace for all 12 sweeps and saves the settings for each point of this trace. The maximum trace is part of the test report.
- The 10 highest emissions are selected with an automatic algorithm of EMC32 searching for peaks in the noise floor and ensuring that broadband signals are not selected multiple times.
- The maxima are then put through the final measurement and again maximized in a 90deg range of the turntable, fine search in frequency domain and height scan between 1m and 4m.
- The above procedure is repeated for all possible ways of power supply to EUT and for all supported modulations.
- In case there are no emissions above noise floor level only the maximum trace is reported as described above.
- The results are split up into up to 4 frequency ranges due to antenna bandwidth restrictions. A magnetic loop is used from 9 kHz to 30 MHz, a Biconilog antenna is used from 30 MHz to 1 GHz, and two different horn antennas are used to cover frequencies up to 40 GHz.

IC ID: 11487S-UNITYV8

7.1.1 Sample Calculations for Field Strength Measurements

Field Strength is calculated from the Spectrum Analyzer/ Receiver readings, taking into account the following parameters:

- Measured reading in dBµV
- 2. Cable Loss between the receiving antenna and SA in dB and
- 3. Antenna Factor in dB/m

All radiated measurement plots in this report are taken from a test SW that calculates the Field Strength based on the following equation:

FS (dBµV/m) = Measured Value on SA (dBµV)- Cable Loss (dB)+ Antenna Factor (dB/m)

Example:

| Frequency (MHz) | Measured SA (dBμV) | Cable Loss (dB) | Antenna Factor Correction (dB) | Field Strength Result (dBµV/m) | |
|--------------------|-----------------------|--------------------|--------------------------------------|-----------------------------------|--|
| 1000 | 80.5 | 3.5 | 14 | 98.0 | |

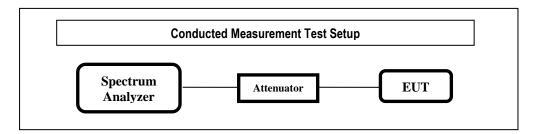

7.2 Power Line Conducted Measurement Procedure

AC Power Line conducted emissions measurements performed according to: ANSI C63.10 (2013)

7.3 RF Conducted Measurement Procedure

Testing procedures are based on 558074 D01 DTS Meas Guidance v04 – "GUIDANCE FOR PERFORMING COMPLIANCE MEASUREMENTS ON DIGITAL TRANSMISSION SYSTEMS (DTS) OPERATING UNDER SECTION 15.247" - April 5, 2017, by the Federal Communications Commission, Office of Engineering and Technology, Laboratory Division.

7.4 Conducted Setup Block diagram

- Connect the equipment as shown in the above diagram.
- Adjust the settings of the SA (Rohde-Schwarz Spectrum Analyzer) to connect the EUT at the required mode of test.
- Measurements are to be performed with the EUT set to the low, middle and high channels and for worst case modulation schemes.

8 <u>Test Result Data</u>

8.1 Frequency Stability

8.1.1 Measurement according to: FCC: CFR 47 Part 2.1055

The center frequency of transmission on middle channel was measured at the low and high supply voltage specified for the equipment in the range of 0 °C to 50 °C' at 10 °C intervals. The frequency stability was calculated using the following equation:

$$ppm \, error = \left(\frac{MCF_{MHz}}{ACF_{MHz}} - 1\right) * 10^6$$

where

 MCF_{MHz} is the Measured Carrier Frequency in MHz ACF_{MHz} is the Assigned Carrier Frequency in MHz

Spectrum Analyzer settings:

- RBW =30 kHz
- VBW ≥ 300Hz
- Set span = 10MHz
- Sweep time = auto couple
- Detector = Pk
- Trace mode = Clear Write
- Marker Stepsize = SWP POINTS
- Sweep Points = 10000 points
- Measure the frequency at the low and high edge (F low and F high)
- Calculate the center frequency MCF = F low + (F high F low)/2

8.1.2 Test conditions and setup:

| Ambient Temperature (C) | EUT Set-Up# | EUT operating mode | Power Input (VDC) |
|-------------------------|-------------|--------------------|-------------------|
| -30°C and 50°C | 3 | BT LE | 1.7 and 3.6 |

FCC ID: 2AA3A-UNITYV8

8.2 Emission Bandwidth

8.2.1 Measurement according to FCC KDB 558074 D01 DTS Meas Guidance v04

Spectrum Analyzer settings:

- Set RBW = 100 kHz
- Set the video bandwidth (VBW) ≥ 3 x RBW
- Detector = Peak
- Trace mode = max hold
- Sweep = auto couple
- Allow the trace to stabilize
- Measure the maximum width of the emission that is constrained by the frequencies associated with the two
 outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the
 maximum level measured in the fundamental emission.

8.2.2 Limits:

FCC §15.247(a)(1) and RSS-247 5.2(1)

• Systems using digital modulation techniques may operate in the 902–928 MHz, 2400–2483.5 MHz, and 5725–5850 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.

8.2.3 Test conditions and setup:

| Ambient Temperature | EUT Set-Up# | EUT operating mode | Power Input | Measurement Path Loss (dB) | Antenna Gain (dBi) |
|---------------------|-------------|--------------------|-------------|----------------------------|-----------------------|
| 24° C | 3 | BT LE | 3 VDC | 16 | 5.3 |

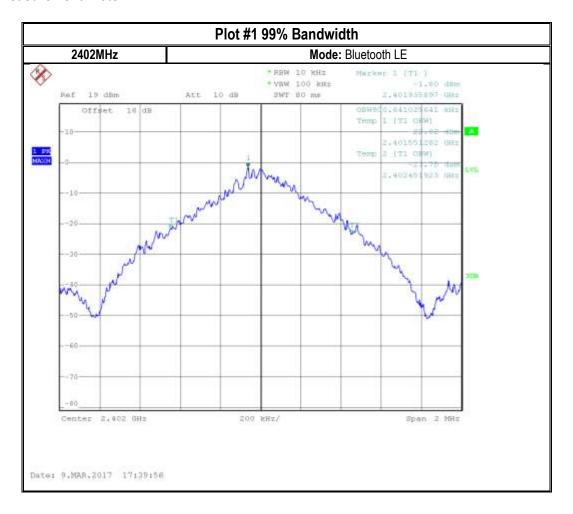

8.2.4 Measurement result:

| Plot # | Frequency (MHz) | 99% Emissions Bandwidth (MHz) | Limit (MHz) | Result |
|--------|-----------------|-------------------------------|-------------|--------|
| 1 | 2402 | 0.9 | > 0.5 | Pass |
| 2 | 2442 | 0.891 | > 0.5 | Pass |
| 3 | 2480 | 0.916 | > 0.5 | Pass |

8.3 Maximum Peak Conducted Output Power

8.3.1 Measurement according to FCC KDB 558074 D01 DTS Meas Guidance v04

Spectrum Analyzer settings:

- Span = approximately 5 times the 20 dB bandwidth
- RBW > the 20 dB bandwidth of the emission being measured
- VBW ≥ RBW
- Sweep = Auto couple
- Detector function = Peak
- Trace = Max hold
- Use peak marker function to determine the peak amplitude level.

8.3.2 Limits:

Maximum Peak Output Power:

• FCC §15.247 (b): 1 W

• IC RSS-247: 1 W

8.3.3 Test conditions and setup:

| Ambient Temperature | EUT Set-Up# | EUT operating mode | Power Input | Measurement Path Loss (dB) | Antenna Gain (dBi) |
|------------------------|-------------|--------------------|----------------|----------------------------|-----------------------|
| 22° C | 3 | BT LE | 3 VDC | 16 | 5.3 |

8.3.4 Measurement result:

| Plot # | Frequency (MHz) | Maximum Peak Conducted Output Power (dBm) | EIRP (dBm) | Limit (dBm) | Result |
|--------|--------------------|--|---------------|-------------------------|--------|
| 1 | 2402 | 3.45 | 8.75 | 20.99(Pk) / 26.99(EIRP) | Pass |
| 2 | 2442 | 3.68 | 8.98 | 20.99(Pk) / 26.99(EIRP) | Pass |
| 3 | 2480 | 3.89 | 9.19 | 20.99(Pk) / 26.99(EIRP) | Pass |

8.4 Power Spectral Density

8.4.1 Measurement according to FCC KDB 558074 D01 DTS Meas Guidance v04

Spectrum Analyzer settings for Peak PSD method:

- Set analyzer center frequency to DTS channel center frequency.
- Set the span to 1.5 times the DTS bandwidth
- Set RBW to: 3 kHz ≤ RBW ≤ 100 kHz.
- Set the VBW ≥ 3 x RBW.
- Detector = Peak.
- Sweep time = Auto couple.
- Trace mode = Max hold.
- Allow trace to fully stabilize.
- Use the peak marker function to determine the maximum amplitude level within the RBW.
- If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

8.4.2 Limits:

FCC§15.247(e) & RSS-247 5.2(2)

 For digitally modulated systems, the peak power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

8.4.3 Test conditions and setup:

| Ambient Temperature | EUT Set-Up# | EUT operating mode | Power Input | Measurement Path Loss (dB) | Antenna Gain (dBi) |
|------------------------|-------------|--------------------|-------------|----------------------------|-----------------------|
| 22° C | 3 | BT LE | 3 VDC | 16 | 5.3 |

8.4.4 Measurement result:

| Plot # | Frequency (MHz) | Maximum Power Spectral Density (dBm / 3kHz) | Limit (dBm / 3kHz) | Result |
|--------|-----------------|---|-------------------------|--------|
| 1 | 2402 | -1.92 | 8 | Pass |
| 2 | 2440 | -3.07 | 8 | Pass |
| 3 | 2480 | -2.62 | 8 | Pass |

Note: PSD results were adjusted to include antenna gain.

8.5 Band Edge and Restricted Band Compliance

8.5.1 Measurement according to FCC KDB 558074 D01 DTS Meas Guidance v04

Spectrum Analyzer settings for non-restricted band edge:

- Set the center frequency and span to encompass frequency range to be measured
- RBW = 100 kHz
- VBW ≥ 3 x RBW
- Sweep Time: Auto couple
- Detector = Peak
- Trace = Max hold
- Allow trace to fully stabilize
- Use the peak marker function to determine the maximum amplitude level
- Set the marker on the emission at the band edge, or on the highest modulation product outside of the band, if this level is greater than that at the band edge

8.5.2 Limits non restricted band:

FCC§15.247 (d)

• In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

RSS-247 5/5

• In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30dB instead of 20dB.

Spectrum Analyzer settings for restricted band:

Peak measurements are made using a peak detector and RBW=1 MHz

8.6 Radiated Transmitter Spurious Emissions

8.6.1 Measurement according to ANSI C63.10 (2013)

Spectrum Analyzer Settings:

- Frequency = 9 KHz 30 MHz
- RBW = 9 KHz
- Detector: Peak
- Frequency = 30 MHz 1 GHz
- Detector = Peak / Quasi-Peak
- RBW=120 KHz (<1GHz)
- Frequency > 1 GHz
- Detector = Peak / Average
- RBW= 1MHz
- Radiated spurious emissions shall be measured for the transmit frequencies, transmit power, and data rate
 for the lowest, middle and highest channel in each frequency band of operation and for the highest gain
 antenna for each antenna type, and using the appropriate parameters and test requirements.
- The highest (or worst-case) data rate shall be recorded for each measurement.
- For testing at distance other than the specified in the standard, the limit conversion is calculated by using 40 dB/decade extrapolation factor as follow: Conversion factor (CF) = 40 log (D/d) = 40 log (300m / 3m) = 80dB

8.6.2 Limits:

FCC §15.247

• In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Test Report #: EMC_KSTEC-003-17001_15.247_DTS Rev 1 FCC ID: 2AA3A-UNITYV8

Date of Report 2017-04-28 Page 33 of 46 IC ID: 11487S-UNITYV8

FCC §15.209 & RSS-Gen 8.9

• Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

| Frequency of emission (MHz) | Field strength (μV/m) | Measurement Distance (m) | Field strength @ 3m (dBµV/m) |
|-----------------------------|-----------------------|--------------------------|------------------------------|
| 0.009-0.490 | 2400/F(kHz) / | 300 | - |
| 0.490-1.705 | 24000/F(kHz) / | 30 | - |
| 1.705–30.0 | 30 / (29.5) | 30 | - |
| 30–88 | 100 | 3 | 40 dBμV/m |
| 88–216 | 150 | 3 | 43.5 dBµV/m |
| 216–960 | 200 | 3 | 46 dBμV/m |
| Above 960 | 500 | 3 | 54 dBμV/m |

FCC §15.205 & RSS-Gen 8.10

• Except as shown in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

| MHz | MHz | MHz | GHz |
|-------------------|---------------------|---------------|-------------|
| 0.090-0.110 | 16.42-16.423 | 399.9-410 | 4.5-5.15 |

8.6.3 Test conditions and setup:

| Ambient Temperature | EUT Set-Up# | EUT operating mode | Power Input | Antenna Gain (dBi) |
|---------------------|-------------|--------------------|-------------|--------------------|
| 23° C | 1 and 2 | BT LE | 3 VDC | 5.3 |

8.6.4 Measurement result:

| Plot # | Channel # | EUT Set-Up# | Scan Frequency | Limit | Result |
|--------|-----------|----------------|-----------------|-------------------|-------------------|
| 1-3 | Low | 1 | 30 MHz – 18 GHz | See section 8.6.2 | Pass - See Note 2 |
| 4-5 | Mid | 1 | 9 kHz – 1 GHz | See section 8.6.2 | Pass |
| 6-8 | Mid | 2 - See Note 1 | 1 GHz – 40 GHz | See section 8.6.2 | Pass - See Note 2 |
| 9-11 | High | 1 | 30 MHz – 18 GHz | See section 8.6.2 | Pass - See Note 2 |

Note1: Spot-check RSE was conducted with the rev E sample.

Note2: The average field strength in the test results from 1 GHz to 18 GHz was calculated by applying -11.5 dB duty cycle correction to the peak measurement, corresponding to the maximum duty cycle of 7% for Bluetooth LE hopping over minimum of 15 channels. The Duty cycle correction factor was calculated using the following formula, CF = 10 log .07 = -11.5 dB

10 Test Equipment And Ancillaries Used For Testing

| Item Name | Equipment Type | Manufacturer | Model | Serial # | Calibration Cycle | Last Calibration Date |
|----------------------------|---------------------------|--------------------|-----------|----------|----------------------|-----------------------------|
| Antenna Biconilog 3142E | Biconlog Antenna | EMCO | 3142E | 166067 | 3 years | 6/14/2014 |
| Antenna Loop 6512 | Loop Antenna | ETS Lindgren | 6512 | 49838 | 3 years | 3/13/2014 |
| Antenna Horn 3115 SN 35111 | Hom Antenna | EMCO | 3115 | 35111 | 3 years | 7/24/2015 |
| Antenna Horn 3116 | Hom Antenna | ETS Lindgren | 3116 | 70497 | 3 years | 7/22/2015 |
| Digital Barometer | Compact Digital Barometer | Control Company | 35519-055 | 91119547 | 2 Years | 4/7/2015 |
| FSU26 | Spectrum Analyzer | R&S | FSU26 | 200065 | 3 years | 7/4/2015 |
| FSU26 | Spectrum Analyzer | R&S | FSU26 | 200302 | 3 years | 7/4/2015 |
| Thermometer Humidity TM320 | Thermometer Humidity | Dickson | AY1072 | 0528 | 1 Year | 11/2/2016 |

Note:

^{1.} Equipment used meets the measurement uncertainty requirements as required per applicable standards for 95% confidence levels.

Calibration due dates, unless defined specifically, falls on the last day of the month. Items indicated "N/A" for cal status either do not specifically require calibration or is internally characterized before use.
